

SecurAcath PICC Benefits

Dramatically Reduces Catheter Dislodgement

- SecurAcath clinical data publications show catheter dislodgement rates of 0-1.5%¹⁻⁶
- Adhesive securement devices have published dislodgement rates of 14-20%⁷⁻⁸
- Decreased catheter replacement costs
 - PICC replacement cost is approximately \$500 at bedside, \$1000 in IR⁹, \$1200 in pediatrics

Decreased Catheter Movement or Migration

- Catheter movement at the insertion site can introduce bacteria beneath the skin¹⁰
- Improved stability may promote healing at insertion site which acts as a natural barrier to infection
- May reduce phlebitis, thrombosis and infection

Increased Stability

- SecurAcath secures right at the catheter/skin junction
- Minimizes catheter movement, pistoning and migration

Improved Efficiency

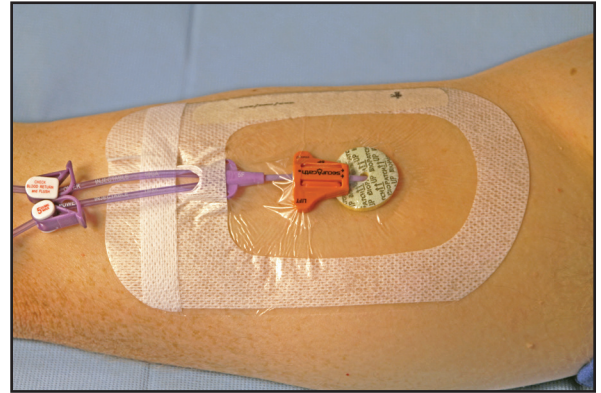

- SecurAcath is much faster to use than adhesive devices
- One SecurAcath secures for the life of the line
- SecurAcath saves nursing time during weekly dressing changes
 - Dressing change can be done 3-5 minutes faster
- SecurAcath allows for easy catheter repositioning

360 Degree Site Cleaning While Secured

- Excellent cleaning access around the entire insertion site
- Catheter remains stable and secure during cleaning
- Improved stability and cleaning may help reduce infections

Decreased skin irritation

- Adhesives can cause skin irritation and breakdown
